Education

University Of Maryland

MAJORING IN COMPUTER SCIENCE, IMMERSIVE MEDIA DESIGN, MINOR IN CLASSICS

May 2028 - 3.8 GPA

- CS Course Work — Advances in XR, Game Design, Web Application Development, Algorithms, Organization of Program Languages, Intro to Computer Systems, Object-Oriented Programming II,
- Math Course Work — Discrete Structures, Linear Algebra, Calculus III, Applied Probability and Statistics

Selected Topics: Advances in XR

CMSC498F

- Project-based course covering XR technologies and core Game Design principles
- Explored the graphics pipeline and audio pipeline, methods of implementation, and optimizations
- Shipped a final interactive XR project built in Unity with the Meta XR All-In-One SDK

Game Design*

CMSC425

- Project-based course covering the full Unity game development lifecycle
- Applied game design principles to find what makes games compelling and enjoyable
- Collaborated on a multidisciplinary team to design, develop, and ship a 3D game in Unity

Projects

Game Design in Unity

[HTTPS://GITHUB.COM/AVY4](https://github.com/AVY4)

Winter 2025 - Present

- Structured Unity development experience through personal projects and multiple university classes in the Computer Science and Immersive Media Design programs
- Full development cycle experience including design, implementation, presentation, and release

SLORL [LINK]

- Developed and launched a web-based puzzle platformer in Unity, designing game mechanics, levels, and visual art direction
- Integrated platform APIs and SDKs to optimize game functionality and ensure compatibility across Armor Games, Kongregate, and Y8 Games
- Achieved 10,000+ plays to date and a 71% player rating

BOUNTY [LINK]

- Developed gameplay mechanics in C# including beatmap systems and scoring logic
- Constructed and configured Unity scenes for core gameplay functionality
- Collaborated with a multidisciplinary team to iteratively design and refine the game's art style, mechanics, and sound design

BOXING SIMULATOR [LINK]

- Final project for XR Development course, built around the theme of Competitive Sports
- Developed an immersive XR boxing game designed to teach fundamental boxing techniques through interactive gameplay
- Utilized physically based audio, virtual object interaction, IRL -> VR locomotion

Experience

Atlas Arena

INTERN

Summer 2026

- Collaborated with a multidisciplinary team to design and develop a new game mode for the Atlas Arena platform
- Programmed new gameplay systems for their in-house puzzle game "Polar Winds"
- Created a training mode that enables users to practice multiplayer gameplay with AI-controlled companions instead of a human team

Skills

Programming:

Java, JavaScript, Python, GDScript, C#, C, HTML, CSS, OCaml, SQL (SQLite)

Software:

Godot, Unity, Aseprite, DB Browser

(Inter)Personal:

Clear Communication, Creative Thinking, Research Experience
